

PRINT DATA CAPTURE OVERVIEW

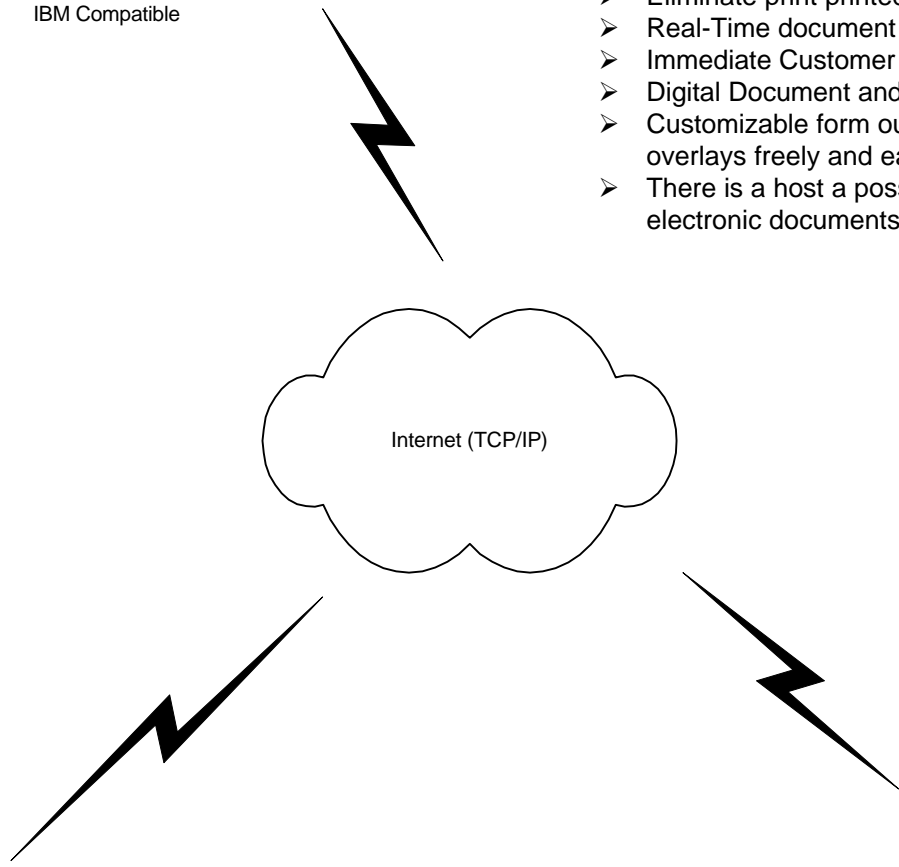

Processing:

Software will capture existing print stream, format and route document for laser output. Document is converted to an image file and overlaid onto a customizable template. Because we have control of the process we can manipulate the documents as we see fit. I.E. Add barcodes, add graphics, change fonts, etc. Once we have an electronic document we have complete flexibility to store it, print it, send to a web server, send to the home office, or even automatically fax it to anyone.

Advantages:

- Eliminate print printed forms cost
- Real-Time document management solution
- Immediate Customer Access
- Digital Document and Paper Document
- Customizable form output (Change your overlays freely and easily)
- There is a host a possibilities when you have electronic documents

Once the data is captured and stored there are a host of possibilities

New Mobile Devices can display images of data
